The embodiments of the invention in which an exclusive property or privilege is claimed are defined on follows:

- 1. A method of tracing the activity of an expression, said method comprising the steps of:
  - (a) specifying a machine-implemented process in which a trigger expression is to be traced;
  - (b) specifying the trigger expression to be traced in the machine-implemented process;
  - storing the state of the trigger expression when it is active within the machineimplemented process without interrupting the process; and
  - (d) restoring the state of the trigger expression when requested.
  - 2. The method of claim 1, further comprising:
    - (a) imposing a condition onto the trigger expression; and
    - (b) storing the state of the trigger expression only when the condition is satisfied.
  - 3. The method of claim 1, wherein the step of storing the state of the trigger expression further comprises:
    - (a) creating a history of the trigger expression comprising storing each state of the trigger expression when it is active.
  - 4. The method of claim 3, further comprising:
    - (a) displaying the history such that the state of the trigger expression each time the trigger expression was active can be displayed separately.
- The method of claim 1, wherein the trigger expression is one which results in an L value during the machine-implemented process.
- 1 6. The method of claim 5, wherein the activity is a call to a memory location of the trigger expression.

- The method of claim 6, wherein the call to a memory location is a Read and/or a Write.
- 1 8. The method of claim 1, further comprising:
  - (a) specifying at least one attached expression;
    - (b) storing the state of the at least one attached expression when the trigger expression is active within the machine-implemented process; and
    - (c) restoring the state of the at least one attached expression when requested.
- 1 9. The method of claim 1, wherein the machine-implemented process is a computer program.
- 1 10. The method of claim 1, as included in an object level trace program.
  - 11. The method of claim 1, as included in a debug program.
  - 12. A method of tracing the activity of an expression in an executing computer program, said method comprising the steps of:
    - (a) specifying the computer program in which a trigger expression resulting in an L value during the execution of the computer program is to be traced;
    - (b) specifying the trigger expression and any optional attachment expressions to be traced in the computer program;
    - (c) imposing a condition onto the trigger expression;
    - (d) storing the state of the trigger expression and any optional attachment expressions when the computer program has accessed a location in memory pertaining to the trigger expression and the conditions are satisfied to create a snapshot, the step of storing accomplished without interrupting the process;
    - (e) creating a profile of the trigger expression comprising storing each snapshot;
    - (f) displaying the profile such that each snapshot can be displayed separately; and
    - (g) restoring the state of each snapshot, when requested.

- 13. A tracing device, comprising:
  - (a) a memory functionally connected to the digital logic device capable of executing a sequence of instructions;
  - (b) a program to monitor the activity of an expression during the execution of the sequence of instructions;
  - (c) a snapshot of the state of the expression every time the expression is active during the execution of the sequence of instructions;
  - (d) a history stored in the memory, the history being a plurality of snapshots;
  - (e) a state restorer which restores the state of the expression in a snapshot;
  - (f) a user interface by which a user may interact with the program, a snapshot, and the history.
  - 14. The tracing device of claim 13 as incorporated into an debug program to debug the sequence of instructions.
  - 15. The tracing device of claim 13 as incorporated into an object trace program.
  - 16. The tracing device of claim 13, further comprising an attachment expression profiler which stores the state at least one attachment expression with each snapshot.
  - 17. The tracing device of claim 13, wherein the tracing device and the digital logic device are incorporated into the same computer.
- 1 18. The tracing device of claim 13, wherein the tracing device and the digital logic device are separate units connected by a data communications link.

- 19. A processing device to trace the activity of an expression in a computer device, said processing device, comprising:
  - (a) a processor;
  - (b) a memory functionally connected to the processor;
  - (c) a first computer program executing by the processor in which the expression is active:
  - (d) a second computer program to trace the activity of the expression within the memory during the execution of first computer program;
  - (e) a snapshot which stores the state expression every time the expression is active during the execution of the first computer program;
  - (f) an attachment expression profiler which stores the state at least one attachment expression with each snapshot;
  - (g) a history stored in the memory, the history being a plurality of snapshots;
  - (h) a display unit to display the history to a user; and
  - (i) an input device by which the user can input the expression to be traced.
- 20. A profiler to record the profile of a particular expression/variable within a program executing within a logical processing device, said profiler comprising:
  - (a) means to choose the particular expression/variable in a program executing within the logical processing device;
  - (b) means to record a snapshot of the particular expression/variable whenever the program addresses a memory location of the particular expression/variable without interrupting the program;
  - (c) means to collect a plurality of snapshots into a profile of the particular expression/variable, each snapshot corresponding to each time the program addressed the memory location of the particular expression/variable;
  - (d) means to display the profile of the particular expression/variable.

- 1 21. The profiler of claim 20, further comprising:
- 2 (a) means to set at least one attachment expression active within the program;
  - (b) means to record the state of the at least one attachment expression whenever a snapshot of the particular expression/variable is taken;
  - (c) means to attach each state of the at least one attachment expression to the snapshot of the particular expression/variable when taken; and
  - (d) means to display the profile of the at least one attachment expression to a user.
  - 22. The profiler of claim 20, further comprising;
    - (a) means to delete the profile.
    - 23. The profiler of claim 20, further comprising:
      - (a) means to change the particular expression/variable.
    - 24. The profiler of claim 21, further comprising:
      - (a) means to change the at least one attachment expression.

- 25. An article of manufacture, comprising a data storage medium tangibly embodying a program of machine readable instructions executable by an electronic processing apparatus to perform method steps for operating an electronic processing apparatus, said method steps comprising the steps of:
  - (a) initiating a user interface to exchange data input/output with a user and an electronic processing apparatus;
  - (b) requesting a trigger expression from a user;
  - requesting a program identification of a program in which the trigger expression is to be traced;
  - (d) causing the electronic processing apparatus to execute the identified program;
  - (e) storing the state of the trigger expression each time a memory operation occurs to the trigger expression during the executing identified program without interrupting or otherwise stopping execution of the identified program as a snapshot;
  - (f) maintaining the capability to restore each snapshot and display each snapshot to the user.
- 26. The article of manufacture of claim 25, further comprising:
  - (a) requesting the user to assign conditions to the trigger expression whereupon when the conditions are satisfied, a snapshot of the trigger expression is stored.
- 27. The article of manufacture of claim 25, further comprising:
  - (a) requesting the user to indicate attached expression whose states are also stored in a corresponding snapshot whenever a snapshot is stored for the trigger expression.
